**EAGLE VETIVER SYSTEMS LIMITED**  
Green Solutions for Sustainable Development

## Eagle Vetiver Systems Papua New Guinea

Eagle Vetiver Systems is pioneering sustainable land restoration in Papua New Guinea, showing how grassroots innovation can deliver measurable climate impact and inspire broader action toward a more sustainable future.

By harnessing vetiver's natural properties, they provide climate-smart solutions that protect communities from flooding, improve agricultural productivity, and contribute to global carbon reduction goals.

CEO

**Green Feeds LTD**

## **Green Feeds** Grenada

Green Feeds diverts waste from landfill and transforms organic and non-organic waste streams into high-value products, converting:

- Clean woody biomass into biochar, soil amendments, essential oils, feed additives, renewable energy, and carbon-removal credits
- Organic and agricultural waste into sustainable animal feed and fertilisers
- Non-biodegradable waste such as used oils, plastics and tyres into energy, fuels, carbon black, and export-ready industrial products

**Claire Benson**  
Founder &  
Managing Director

**OraSoil**  
Fiji

OraSoil is piloting a hub-and-spoke model to produce market-ready end products, including cocopeat, biochar, weed matting, and coir geotextiles.

These agricultural by-products from food production are transformed into soil-restoring inputs that improve water retention, reduce erosion, replace plastic-based materials, and build long-term soil fertility.

## SarGas Grenada

SarGas valorises Sargassum and other biowaste streams to produce renewable biogas for grid-connected electricity generation, reducing fossil-fuel dependency and strengthening energy resilience.

By 2030, SarGas aims to deploy 20 MW of biogas-derived electricity capacity across the Caribbean basin, displacing up to 1.2 million tonnes of CO<sub>2</sub>-equivalent emissions annually, while creating substantial local employment opportunities.
