

SUBJECT INDEX

Note: most subjects are dealt with from the aspect of control of post-harvest losses, especially during farmer storage, and this is usually implied even if not stated in index entries.

No attempt has been made to cover every possible subject dealt within the items listed but rather to indicate the pages on which relevant material may be found; e.g. individual species of insect pests are not listed, but the pages on which material dealing with insect pests may be found are indicated.

Where a subject is covered outside the main sections devoted to that subject the individual author is indicated as well as the page number to aid rapid identification of the item required.

However, subjects appearing in general sections, e.g. AREA STUDIES, are only selectively indexed.

ABSTRACTS See PERIODICALS and ABSTRACTS

AFRICA. No attempt has been made to list every item on Africa or to make index entries under individual places or areas within a country. Entries are made for individual countries and certain regions. Entries under countries and regions have concentrated on aspects specifically related to that country/region - the mere fact that an author lives in a country, or that the work has been published there, is not of itself sufficient to justify entry under the country, though in many cases arbitrary decisions have had to be made. No entries have been made for the many short items appearing in the "News Review" section of Tropical Stored Products Information.
